We develop your business

WHY OFFSHORE SERVICES?

- 1. Efficient investment** in the IT system must be made having in mind business bench-marks that can be compared in your own industry or in other industries and is vital. During our own experience we observed that the lack of comparativeness leads whether to an increase in initial expenses whether to an inefficient solution now or in the future.
- 2. Optimal investment** keeps track of the business' growth simultaneously with technology evolution
- 3. IT Offshore** will reduce costs regarding administration, by optimizing the allocation of specialists to each field balancing and distributing their overloading.
- 4. Concentrating** on the core business is vital for companies. The purpose of what we call offshore is not just that of reducing costs but it also means efficient organization.
- 5. As a strategic domain** appreciated by all companies who want to exploit its benefits, it constantly develops and needs permanent study. Our dedicated specialists are not tributary to old technologies but are in a continuous search for improvement and perfection.

- 6. You don't have to keep investing** to have a competitive IT strategy. If you choose an exterior source you will concentrate your energy on real matters, what we call Needs and Models of Architectural and Organizational Development. It will be up to your IT partner to find the best solutions.
- 7.** During the critical growth periods or reorganization - diversification, fusion, acquisition, etc - your IT partner will administer these changes and will act to efficiently manage this period by allocating more specialists when needed, and permanently adjusting to necessities.
- 8. Offshore is an effective remedy** even when it's administered in small doses. Which activities can you offshore? Maybe the helpdesk for users or the IT strategy.

We can help you examine then step by step, from the beginning. When Offshore is the question, the answer is not "Yes" or "No" but "What exactly?", "How?", "When?" and especially "With whom?"

SOFTWARE SERVICES

Our vision on offshore is to become your only contact partner, for everything that we generally call business technology:

- delivering complete specifications for projects and IT consultancy, based on the client requirements;
- software development based on the client requirements;
- project management;
- complete software products maintenance;
- migration or redesign of existing applications;
- user and technical documentation;
- training and consultancy;
- technical assistance, maintenance and service for software products;
- testing, verification and validation services.
